

A User's Guide to the Squat Toilet

This guide provides instructions for the correct and hygienic use of a squat toilet.

Toilet Components

The squat toilet is a simple and effective sanitation fixture. As shown in the image below, its main components are:

- **Seat:** The area where you position yourself over the drainage area.
- **Foot Rests:** Raised, textured platforms on either side of the seat for secure footing.
- **Drainage Area:** The basin that receives waste and channels it away.

How to Use a Squat Toilet: A Step-by-Step Guide

- 1 **Prepare Your Trousers:** To avoid soiling your clothes, lower your trousers and underwear to your ankles or remove them completely.
- 2 **Position Your Feet:** Step onto the foot rests, placing one foot on each side of the drainage area. Your feet should be shoulder-width apart for stability.
- 3 **Maintain Your Balance:** Carefully lower yourself into a squatting position. For better balance, you can rest your elbows on your knees.
- 4 **Use the Toilet:** Relieve yourself into the drainage area.
- 5 **Clean and Flush:** Use toilet paper or water to clean yourself. If there is a flushing mechanism, use it. Otherwise, use a bucket of water to flush the toilet.

Safety and Hygiene Recommendations

- **Use Toilet Paper:** It is advisable to bring your own toilet paper, as it may not always be provided.
- **Avoid Slipping:** The floor around a squat toilet can be wet. Be cautious when stepping on and off the foot rests to avoid slipping.
- **Wash Your Hands:** Always wash your hands thoroughly with soap and water after using the toilet.

Pre-Use Checklist

- ☐ Do I have toilet paper?
- ☐ Is the floor area clear and as dry as possible?
- ☐ Are my sleeves rolled up and trouser pockets empty?
- ☐ Do I have a stable footing on the foot rests?
